**Unlike other surfacing materials, Hanex® Solid Surfaces is non-porous and features full dimensional colouring. This allows HANEX® to be easily polished, removing any surface damage such as scratches, allowing you to restore the surface to its original condition.**

### **Simple steps to avoid damage:**

- Avoid cutting directly on HANEX®, always use a cutting board.
- Never place hot pans directly on the worksurface. Even though HANEX® can withstand high temperatures, prolonged periods or extreme heat could cause permanent damage.
- Strong acids, such as those found in drain cleaners should be flushed with water immediately. Some of these items, when left on surface may cause whitening, which can be difficult to remove.

### **Care Kit Contents**

- Bar Keepers Friend
- Bar Keepers Power Clean
- Sponge
- Microfibre Cloth
- Warranty Registration Card

## **EVERYDAY CLEANING**

Wipe clean with a damp cloth or sponge soaked in water. For basic stains, clean with mild detergents or general all purpose cleaners.

## **HEAT DAMAGE**

The innate feature of HANEX® gives it excellent heat resistant properties compared to other surfacing materials in the market. However, placing hot pans or heat-generating appliances directly on HANEX® may cause damages to your countertop. Avoid direct and indirect heat reaching temperatures of 80°C(170°F) or above. Always use pad or trivets with rubber feet when placing hot items on the work surface.

## **CHEMICAL DAMAGES**

Avoid contact with strong chemicals that can cause damage to the surface such as oven cleaners, acetone, paint removers and other strong chemicals. If exposed, promptly flush with water. Remember, prolonged contact with harsh chemicals can cause serious damage to your the work surface.

## **REMOVING PERSISTENT STAINS**

For deep scratches and/or other damages which may require an expert repair, please contact your authorized HANEX® repair agent or certified HANEX® fabricator.
